

# iSectors® Global Conservative Allocation

## Portfolio Description

The objective of iSectors® Global Conservative Allocation model is to provide current income and offer some potential for capital appreciation. Twenty five percent of the model has been allocated to global equities and approximately 75% of the model has been allocated to a diversified portfolio of exchange-traded funds (ETFs) holding fixed income securities. The fixed income portion of the portfolio will continue to be diversified across a range of low-cost ETFs. The core of this portfolio holds domestic and international government, investment grade corporate, and mortgage-backed bonds with various maturities. The remainder of the fixed income portfolio is invested in ETFs that hold non-investment grade fixed income securities, high-yield bonds and emerging markets debt instruments in an effort to add diversification and the potential for increased returns. The equity portion of the portfolio will continue to be allocated among a diversified selection of domestic and international low-cost equity index-based ETFs. In addition, fundamentally-weighted, dividend-focused index ETFs are used in an effort to enhance return and reduce volatility. The portfolio is intended for investors with a conservative risk utility and a short to intermediate time horizon.

Portfolio Composition <sup>1</sup>	
<b>Equity (24.5%)</b>	
Large Cap Growth ETF	Domestic Equity
Large Cap Dividend ETF	Domestic Equity
