

iSectors® Post-MPT Growth Allocation

Portfolio Description

The objective of the iSectors® Post-MPT Growth Allocation is to achieve market returns with lower downside risk over a complete market cycle. The portfolio manager objectively allocates and rebalances the portfolio (risk/return) monthly among up to 9 specific, low-correlated asset classes. The quantitative process is guided by monthly changes in two dozen economic and capital market factors. Portfolios may be invested up to 30% at any one time into any single asset class, with the exception of government bonds, to which the model may allocate up to 50%. iSectors® Post-MPT Growth Allocation is available for all types of accounts including: high net worth individuals, trusts, foundations, endowments, retirement plans, and IRAs.

Diversification & Correlation: iSectors vs. Traditional Method

	Bonds	Gold	Energy	Finance	Health	Tech	Materials	Real Est.	Utilities

Healthcare	up to 30%
Real Estate	up to 30%
Technology	up to 30%
Utilities	up to 30%

iSectors re-optimizes and reallocates the portfolio among up to nine different asset classes (as listed above) on a monthly basis, according to our proprietary asset-allocation algorithm, which uses updated capital market and economic data in the calculations.

iSectors® Post-MPT Growth allocates among asset classes that are less correlated to each other (see table, upper left) when compared to the traditional Morningstar Capitalization-Style box asset classes, which have become very closely correlated (see table, lower left).

Correlation data obtained from third party sources believed to be reliable, but cannot be guaranteed.

For more detailed fee/performance/holdings information, please visit the iSectors website for the most recent fact sheet.

There is no assurance that any specific securities listed will remain a part of the model. An investment in any iSectors® allocation model is not guaranteed and, at any given time, may be worth more or less than the amount invested.
